## A MINIATURE MULBERRY TREE THAT'S PERFECT FOR SMALLER GARDENS!

Compact enough to be grown as a solitary specimen in a patio pot, but equally lovely in borders or mixed containers, this remarkable little tree was awarded the prestigious RHS Chelsea Flower Show Plant of the Year in 2017. Along with its diminutive stature, the judges found it a worthy winner for its ability to bear fruit on both old and new wood.

This means Mojo Berry® can produce repeated flushes of berries much earlier, over a longer period of time than most cultivars, beginning in May and continuing through September. Additionally, the trees usually begin fruiting at a very young age – even within the first year, without the need for a pollinating partner. The sweet, earthy, seedless berries are great for use in jams, jellies, cakes, and other tasty treats.

For best results, plant Mojo Berry® in a sunny location, in fertile, well-drained soil. Robust, and easy to grow, Mojo Berry® makes an ideal fruiting plant for beginning gardeners, or for any home garden, since it's long fruiting, self-pollinating and compact – all strong benefits that home gardeners seek.

- Dwarf, deciduous shrub or tree
- 5'H x 3.5'W
- Produces fruit on old and new wood
- Long fruiting season
- Self-pollinating
- Plant in fertile, well-drained soil
- Full sun
- USDA Zone 7
- 2017 RHS Chelsea Flower Show Plant of the Year
